Electric Vehicle Charging

ENERGY

The SMART.NODE™ is equipped to host a dedicated Electric Vehicle Charging (EVC) station that has the capacity to supply 7kW, 11kW and 22kW capacity charging to a wide variety of electrical vehicles, achieved by partnering with well-known EVC platforms to deliver the service to the wider public.

As state authorities and the Federal Government expand EV subsidies and tax rebates nationwide, and the purchasing cost of an EV approaches parity with traditional vehicles, demand for EV is bound to rise. Local authorities will come under pressure to provide the appropriate infrastructure in tandem with this growth.

Coupling the right charging hardware with the right software application, such as Chargefox, helps Land Authorities in their bid to provide the best charging experience for communities. Chargefox runs a large-scale network of more than 400 EVCs across Australia and New Zealand, using a corresponding smartphone app to handle payments for charging sessions.

ENE.HUB

THE TECHNOLOGY ACCOMMODATED BY THE SMART.NODE™ IS CONTINUOUSLY EVOLVING. ENE.HUB CAN INVESTIGATE THE ACCOMMODATION OF ADDITIONAL SCS DEVICES.
