

WEST HOLLYWOOD, LOS ANGELES

Wireless Qi Charging

ENERGY

With new and improved smartphone models constantly being released and battery life now an everyday concern, Smart Cities need to cater to a range of charging outlets.

The SMART.NODE™ has the option for Qi wireless charging. Qi (pronounced “chee”) is a wireless charging standard, and the only one currently adopted by most major phone manufacturers. Wireless charging is a technology that allows charging over short distances without cables, the advantage being that it is quicker and easier as there is no need to plug and unplug every time.

Qi is not the only wireless charging method available, but it’s the first one that is supported by two of the largest and most influential smartphone makers: Samsung and Apple.

Please note that the Wireless Qi Charging service may not be readily available for inclusion in the SMART.NODE™ as it is still in the design phase.

ENE.HUB

THE TECHNOLOGY ACCOMMODATED BY THE SMART.NODE™ IS CONTINUOUSLY EVOLVING. ENE.HUB CAN INVESTIGATE THE ACCOMMODATION OF ADDITIONAL SCS DEVICES.
