

WEST HOLLYWOOD, LOS ANGELES

HELP ASSIST BUTTON, ASSEMBLED VIEW

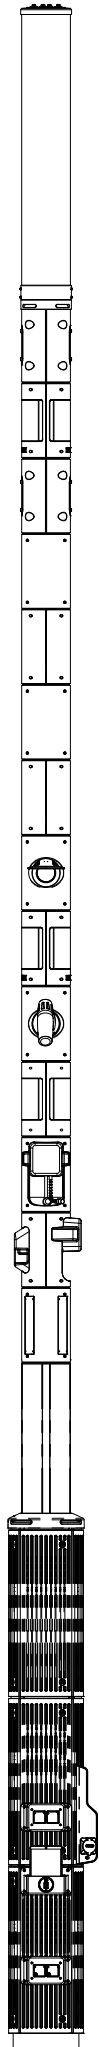

Help Assist Button

SAFETY

The Help Assist Button is installed in the Base Zone and is to be used by the general public in the case of an emergency. The current designs for the service are vandal resistant, with a 3mm stainless steel front panel, and offer high volume capacity and superior speech quality from the integrated 10-watt amplifiers and eHD voice.

The Help Assist Button has the capacity to be directed to any modern phone number via Voice Over Internet, and as such can be direct to emergency services or a security mobile phone number. The unit encompasses a durable microphone and speaker to allow two-way communication. The device can interact with other devices through the e³ platform, such as the PA system for a higher capacity spoken volume and CCTV camera so the person using can be viewed.

The routing of emergency calls is at the discretion of Land Authorities and is based on a TCP/IP configuration.

ENE.HUB

THE TECHNOLOGY ACCOMMODATED BY THE SMART.NODE™ IS CONTINUOUSLY EVOLVING. ENE.HUB CAN INVESTIGATE THE ACCOMMODATION OF ADDITIONAL SCS DEVICES.
