

'FUTURE STREET', SYDNEY CBD

FRONT VIEW

Bicycle/Pedestrian/Scooter/Vehicle Counting

TRANSPORT

If CCTV has been installed in a SMART.NODE™ and the cameras have a clear view of the desired pathways and road traffic, Councils can utilise this service for Bicycle, Pedestrian, Scooter and Vehicle Counting.

This information can be used for the detection of loitering, the identification of unclaimed objects, and can help improve the overall driving experience in cities and understand infrastructure needs.

The IntuVision® software detects and counts pre-configured objects appearing within the CCTV camera feed and transmits the quantified information in a numerical value to be shown and analysed in the e³ platform.

The counting data for an area can be provided for different time periods to allow for comparative assessments and more in-depth findings.

Product Options

Industrial PC 16Gb (Intel NUC-BNUC11TNKI70000)

Advanced Video Analytics (IntuVision® software for object counting)

COM-IPC-000-00-002A
